

A 3D molecular model of a protein structure, likely a viral capsid, showing a complex arrangement of subunits. A specific site is highlighted in red, labeled "rs116596918(G/C)". This site is located on a subunit that is part of a larger, more structured region of the protein. The rest of the protein structure is shown in a light blue/cyan color. The model illustrates the spatial arrangement and potential interactions of the amino acid residues at the mutation site.
